2022 SUMMER INTENSIVE

July 11 - August 19, 2022

SUMMER INTENSIVE

Our flagship 6-week virtual Summer Intensive coding program teaches high school-aged young men of color web development, an entrepreneurial mindset, and leadership skills to kickstart a career in technology and help close the racial wealth gap. Addressing the digital divide by providing laptops and wifi access free of charge, we enable our students to walk away with a viable product starting from little to no coding experience. The Summer Intensive culminates in Demo Day where students present their original product ideas to our corporate partners.
